

Towngas is honoured again with Gold Award of “BOCHK Corporate Environmental Leadership Awards”

(1 June 2017) The Hong Kong and China Gas Company Limited (Towngas) is honoured again with the Gold Award in Manufacturing Sector of “Bank of China (Hong Kong) Limited (BOCHK) Corporate Environmental Leadership Awards” and, for the first time, attained the Belt and Road Environmental Leadership Recognition Award at the 2016 Prize Presentation and 2017 Launching Ceremony held today in recognition of our contribution to improving the environment.

The “BOCHK Corporate Environmental Leadership Awards” are presented by The Federation of Hong Kong Industries and BOCHK, with an aim of promoting environmental practices among the manufacturing and service enterprises in Hong Kong and the Pan Pearl River Delta region to reduce environmental pollution in these areas. Judging criteria for the environmental projects include comprehensiveness, energy conservation and waste discharge reduction, innovation, management involvement and sense of responsibility, pollution management, as well as sustainability. This Gold Award manifests that the Company’s efforts to protect the environment has gained fruitful results and won public recognition.

Towngas Managing Director Alfred Chan said, “We are honoured and delighted to be rewarded with the Gold Award in Manufacturing Sector for two consecutive years. Towngas is always committed to environmental protection and holds sustainable development in high regard. This has been our key management focus guiding our businesses at all levels, from company policies to daily operations.

Towngas has developed Smart Riser Jacket, a new technology to repair corroded gas pipes since 2015. While saving costs for pipe replacement, it reduces 70% of steel usage and minimises the impact of gas supply suspension on customers. Besides, the new Towngas Telecom Hong Kong Data Centre 2 located in Tseung Kwan O adopts

environmentally-friendly technologies and measures. The data centre is equipped with gas absorption chiller that utilises landfill gas from the nearby Tseung Kwan O landfill for space cooling, turning waste into energy and enhance energy efficiency.”

Looking forward, we will continue to do our utmost to protect the environment and focus on developing new energy in order to create a low-carbon and sustainable environment.
